## Topology

## ⇒ IP configuration

- i) Set PC IP address to 10.0.0.1 and subnet mask to 255.0.0.0
- ii) Set server IP address to 10.0.0.2 and subnet mask to 255.0.0.0
- iii) Go to PC web browser and enter address 10.0.0.2 it goes to default server page
- iv) Go to server → config to edit index files
- v) Go to server → DNS, give name of IP address 10.0.0.2 (www.cn.com) then add
- vi) Go to PC → desktop → web browser → www.cn.com then def your edited page will show.

## Ops execution

→ While entering url address (www.<sup>SN</sup>comp.com)  
~~url~~ it redirects to DNS 10.0.0.2)
